125KHz RFID	4G Transfer	Face Recognition	SOS Button	Impact record

ZOOY Z-6700M is a 4G real-time guard tour system using face recognition technology. When patrol starts, the security duty officer carries Z-6700M to login by his face, and walk along with patrol route, When he arrives at the location, use the Z-6700M to scan the checkpoint, and then automatically record the patrol time, location and staff name. After the data is stored, it is sent to the server in real time through 4G (built-in SIM card), and the administrator can monitor the data through the web software.
